Continuation of 3. NOTE: Applicants amended claims 1, 12, and 18 with the additional new limitations: "...a set of annotation structures each defining a set of annotation fields, and an annotation server configured to receive requests to access annotations for one or more of the annotatable data objects issued by at least one of the plurality of applications on the network, wherein the annotation server is further configured to generate, based on an annotation structure associated with the one or more annotatable data objects points, the one or more interfaces for creating or viewing annotations ...". The scope of the invention has been changed.

Since the persecution of this Application is currently at post-final-action stage, the amendment will not be entered as it necessitates a new search and claim analysis to determined the patentability of the amended claims..
